(54) EAR COVERING DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain an ear covering device which is comfortably worn and also functional by using specific material and structuring it in a specific shape.

SOLUTION: In an ear covering device 10, a flexible band 14 has narrower cloth than ear covering parts 16, is bent in a specified radius of curvature and extends along the back of a head and neck when a user wears it. In such cases, bending the band 14 generates spring force that must be moderate so that the device 10 may not fall off and also that it may not give an unpleasant feeling. Also, the band 14 and ear cup frame members are made of cloth material which has excellent moisture resistance and an excellent feeling, coated with a cover 40 that is formed by plural layers of the cloth material, also engage a speaker wire 38 with one set of accompanying band 42 and hold the wire 38. Thereby, an ear covering device that is comfortable and also functional can be obtained.
